Aims and scope of MIDL

Imaging is a cornerstone of medicine. Advances in deep learning show that computers can extract more information from images, more reliably, and more accurately than ever before. However, most deep learning research in computer vision has focused on natural images. The 4th International Conference on Medical Imaging with Deep Learning (MIDL) focuses on adapting and further developing these techniques to the characteristics of medical images and medical data as an important and relevant research challenge.

Doctoral Symposium

5,000 €

- Exclusive branding of young researcher's satellite event „Doctoral Symposium“
- Named sponsor for best presentation award
- Company name and logo on the Doctoral Symposium website
- Acknowledgement during event
- Company flyer in young researcher's welcome package
